

Advanced Pedagogical Technologies in the Development of the Activities of Practical Psychologists

Shokhida Akhrarovna Raupova

PhD, Senior Lecturer of the Department of Uzbek Language and Pedagogy, Tashkent State Dental Institute

Abstract: This article is devoted to the role and significance of advanced pedagogical technologies in the development of the activities of practicing psychologists. In addition, the relevance of this topic emphasizes the importance of modern approaches and technologies in solving problems facing psychologists and teachers. Based on new information about scientific achievements in the field, it is expected to consider effective approaches that will help form new trends in the educational system and improve the teaching environment.

Key words: *psychological counseling, fundamental features, innovative methods, technology.*

Introduction

Currently, with the rapid development of education and the growing demands of society, there is a need to further improve the activities of practicing psychologists. Advanced technologies in the field of pedagogy are important in this regard and help improve their effectiveness. In recent years, scientific research in the field of psychology and pedagogy has been aimed at improving the working methods of practicing psychologists.

Practical psychologists, as well as educational scientists, are actively involved in the development of various strategies and technologies aimed at improving the quality of education and ensuring the personal and academic development of students. The introduction of advanced pedagogical technologies makes it possible to take into account the individual characteristics of students in educational institutions, ensure their psychological well-being, increase motivation in studying subjects and at the same time facilitate the solution of complex pedagogical problems.

Methods

In identifying and addressing issues in analyzing advanced pedagogical technologies in the development of the activities of practical psychologists, we used some research methods:

- Comparison Method;
- Literature Review;
- Method of Analysis and Synthesis;
- Content Analysis Method.

Results and Discussion

The introduction of modern technologies in education, including e-learning, distance learning, interactive teaching methods, the use of video and audio tools, as well as methods such as personal approach to students, is becoming increasingly important. These approaches serve to increase students' interest in learning, as well as their successful functioning in personal and social life.

In order to create the main part on the topic "Advanced pedagogical technologies in the development of the work of practicing psychologists", first of all, it is necessary to answer questions such as what such

technologies are, how they can improve the work of practicing psychologists. Below are some general recommendations that will shed more light on this topic.

1. Definition of advanced pedagogical technologies. Advanced pedagogical technologies for practicing psychologists may include pedagogical methods, approaches and tools aimed at developing universal human abilities, improving personal and professional skills.
2. Types and methods of technologies. Examples include the use of interactive learning, problem-based learning (PBL), game-based learning, data analytics, distance learning platforms, educational programs that support sustainable development, and more.
3. Benefits for practicing psychologists. The use of modern teaching methods and technologies in conducting psychological counseling, group dynamics, exams, consultation, trainings and seminars can increase efficiency and develop coordination skills.
4. Adaptation in a changing world. Technology and science are developing, and at the same time, practicing psychologists must also constantly update their professional skills, learn new media and technology.
5. Development of personal and social skills. Such technologies can include personal and social skills, communication and effective work, which are very useful when psychologists work with individuals, groups or organizations.
6. Quality education and other factors of development. The main goal of using advanced pedagogical technologies for practicing psychologists is to improve the quality of teaching, to use innovations in solving problems related to the field, and to constantly improve their knowledge in various directions of professional development.

For a deeper understanding of these main parts, it is important to conduct separate studies, investigations and experiments on each point, as well as to familiarize yourself with the latest research and scientific articles in the field of psychology and pedagogy.

Conclusion

Developing the activities of practical psychologists is of urgent importance in the field of education today. The goal of practicing psychologists, that is, practical psychologists, is to improve the mental and pedagogical condition of students in educational institutions, to help them in their personal development and social adaptation, as well as to give advice to pedagogues and parents.

The introduction of advanced pedagogical technologies in the development of his activity helps to expand the achievements of the psychologist:

1. Interactive methods. These methods encourage students to actively participate and play an active role in the learning process. For example, role plays, discussion clubs, group debates, etc.
2. Person-oriented education. Psychologists should pay attention to the individual characteristics, interests and problems of each student so that their effectiveness in learning can increase.
3. Use of technology and digital tools. Using modern educational technologies, such as interactive whiteboards, e-textbooks, online teaching and assessment platforms, to increase students' motivation and arouse their interest in didactic materials.
4. Providing psychological support in treatment. Help students find solutions to behavioral problems, overcome stress and other mental problems through individual and group discussions.
5. Development of communication skills. Effective communication with students and teachers is one of the main tasks of a psychologist, and this, in turn, requires perfecting communication skills.

In conclusion, the introduction of advanced pedagogical technologies for practicing psychologists will help improve their work efficiency and create new opportunities in working with students and their parents. Most importantly, these technologies serve to make the learning environment more positive and productive.
