

Management of Non-State Education System in Digital Education Conditions: Opportunities and Problems

Berdikulova Nasiba Jurakulovna

Gulistan State University, basic doctoral student, E-mail: nasibaberdikulova5@gmail.com

Annotation: This article analyzes the main opportunities and existing problems of managing the non-state education system in a digital education environment. The possibilities of digital technologies such as distance learning, personalized learning platforms, interactive resources, analytical approaches are examined in depth. At the same time, attention is also paid to such pressing problems as the inadequacy of technological infrastructure, digital literacy, and legal norms. The solutions proposed by the author can serve the sustainable development of non-state educational institutions in a digital environment.

Key words: digital education, non-state education system, management, distance learning, innovation, personalization, educational technologies.

Introduction

Contemporary globalization and digitalization processes are profoundly transforming the education system. Private educational institutions, in particular, are actively participating in offering educational services based on digital technologies. This article analyzes the primary opportunities and existing challenges in managing private education systems in a digital learning environment. Additionally, it examines how the scientific heritage of our great scholars can be integrated into modern educational processes.

In recent years, private educational institutions in Uzbekistan have been playing a significant role in liberalizing and diversifying educational services. They stand out through innovative approaches, modern methods, and flexible forms of education. Digital technologies accelerate this process.

Private educational institutions in our country have become full participants in market relations by implementing management functions. Among these functions, systematic analysis and decision-making hold a special place. Analyzing the activities of educational institutions is necessary to identify their effective performance, problems, and contradictions arising during their activities and development processes, determine their causes, and recognize real opportunities. In today's business world, to compete effectively, educational institutions need to continuously collect and analyze vast amounts of information about the education sector, labor market, educational services, competition, and other factors.[1]

Our President emphasizes the importance of youth education and the quality of private educational services: "We mobilize all the power and opportunities of our state and society to ensure that our youth develop as individuals with independent thinking, high intellectual and spiritual potential, and become people who do not lag behind their peers in any field globally, to achieve happiness." [2]

One of the large-scale works being carried out to bring the higher education system in our republic to the level of modern requirements is the rapid development of educational services and the preparation of competitive specialists who meet the demands of the world higher education system, including our country's education system.

Research object and methods

The research object is a private educational institution. The opportunities and challenges in managing a private educational institution have been analyzed. In addressing the research topic, classification, description, historical and comparative, contextual, complex, and functional analysis methods have been used.

Results and analysis

Globalization and digitalization processes are fundamentally changing the education sector today. Private educational institutions, in particular, are striving to provide competitive educational services based on innovative technologies. In Uzbekistan, the private education system has gained significant socio-economic importance in recent years and is forming as an alternative to state educational institutions. Digital education not only presents new opportunities for this system but also necessitates fundamental reforms in management. The article also discusses how the scientific views of our great scholars can be integrated into the modern digital management model.

As Imam Abu Nasr al-Farabi stated: "Knowledge is not just gathering information but training the mind and shaping thought." This idea holds significant relevance in today's digital education environment. Private educational institutions should serve personal development by promoting innovative ideas.

Opportunities unlocked by digital education for the private education sector

Digital education presents several opportunities for the private education system, including:

Implementation of distance learning: The ability to conduct classes from anywhere in the world via the Internet.

Personalized learning platforms: Educational plans tailored to the specific needs of each student.

Knowledge delivery through interactive and media resources: Use of video lectures, simulations, and online tests.

Enhanced management through data analytics: Monitoring student performance and making prompt, informed decisions.

Modern digital technologies offer a chance to fundamentally renew the education system. In particular, private educational institutions are at the forefront of piloting and swiftly implementing cutting-edge innovations. Digital education is laying the foundation for the development of private education in the following key directions:

1. Implementation of distance learning

Thanks to internet technologies, access to education is no longer limited by geography. Private educational institutions now offer online courses to students in any region, delivering quality education even to remote areas. By involving international educators in the learning process, they provide students with access to global knowledge. This is a crucial step toward democratizing and popularizing education.

2. Personalized learning platforms

Digital systems enable the development of individualized learning plans based on a student's age, knowledge level, interests, and learning pace. This allows each student to study at their own speed and focus more deeply on areas of personal interest. It also helps teachers optimize their teaching methods. Personalization moves the learning process away from a "one-size-fits-all" model and encourages active thinking through a learner-centered approach.

3. Knowledge delivery through interactive and media resources

Digital learning tools go beyond simple text and verbal content. They include:

Video lectures

Audio materials

Virtual laboratories

3D animations

Info-graphics

Interactive quizzes

Simulations for explaining complex concepts in an understandable way

These resources capture students' attention, make lessons more dynamic, and reinforce knowledge. They also create a more inclusive environment for visual and kinesthetic learners.

4. Strengthening management through data analysis

With digital systems, student performance is continuously monitored, which brings the following advantages:

Accurate statistical data on each student's activity

Transparent and automated assessment processes

Early identification of gaps and delays in learning, with timely corrective measures

Real-time data-based decision-making in management.

Thus, digital analytics support private educational institutions in developing strategic planning and building effective management systems.

Digital learning tools greatly enhance the practical application of knowledge. In this regard, the words of Beruni remain relevant: *"True knowledge benefits only those who know how to apply it."*

Current challenges in the digital education of the private sector

Despite the vast potential of digital tools, the private sector in digital education faces several challenges:

Technological infrastructure issues: Limited internet speed and shortage of equipment

Low digital literacy among teachers

Underdeveloped legal frameworks

These issues highlight the risks of poor content quality and mismanagement in digital education. To address these problems and ensure sustainable development of the private education sector in a digital environment, the following measures are necessary:

Organizing **regular professional development courses** for teachers

Establishing **public-private partnerships** to improve digital infrastructure

Strengthening quality control and licensing mechanisms

Ensuring **financial sustainability** through innovative business models

In this context, the words of Ibn Sina come to mind: *"The greatest wealth for a human is knowledge. When knowledge is directed toward education, and education toward governance, society will flourish."*

Conclusion

Digital education is opening new horizons for private educational institutions. However, managing this process effectively and utilizing it productively is more important than ever. The scientific views inherited from our great scholars are still relevant today and should be deeply integrated into modern management principles.
